

**NOTICE OF AVAILABILITY
REMEDIAL INVESTIGATION FOR SOILS
SCHLAGE LOCK SITE
2401 & 2555 Bayshore Boulevard
San Francisco, California**

The California Department of Toxic Substances Control (DTSC) is posting this notice to inform interested members of the community that the Remedial Investigation (RI) Report conducted for soil at the Schlage Lock Site (Site) is now available for public review. DTSC is the state regulatory agency that oversees environmental investigations and cleanup work at the Site.

RI FINDINGS: The RI for soils was conducted to define the extent of soil contamination resulting from past industrial practices at the Site. The RI found: 1) the primary contaminants of concern are volatile organic compounds (VOCs) and metals, 2) VOC contamination in soil is primarily concentrated in the southern portion of the Site, below Visitacion Avenue, 3) arsenic and other metals have been detected at low levels throughout the Site, and 4) metals--including cadmium and chromium--have been detected in soil at levels above residential (but not commercial) screening criteria under two buildings on the northern portion of the Site.

INFORMATION REPOSITORIES: Detailed findings of the RI for soils are presented in the *Soil Operable Unit Remedial Investigation Report* dated June, 2001. This report, as well as other documents about environmental activities at the Site, are available for public review at the following locations:

SF Public Library	Visitacion Valley Community Ctr.	Brisbane Public Library
Visitacion Valley Branch	50 Raymond Avenue	250 Visitacion Avenue
45 Leland Avenue	San Francisco	Brisbane
San Francisco	(415) 467-6400	(415) 460-2060
(415) 337-4790		

The full administrative record for the Schlage Lock site is available at the DTSC file room, 2nd floor, 700 Heinz Avenue in Berkeley. Please call (510) 540-3800 to make an appointment to use the file room.

FOR MORE INFORMATION: If you have questions or concerns regarding the environmental activities at this Site, please contact either:
